

Strategic intelligence. Global situational awareness.

For geopolitical analysts, defence researchers, security consultancies and think tanks. Follow developments as they unfold, investigate the evidence behind them, and brief decision-makers on what they mean.

INFORMATION IS EVERYWHERE. CLARITY ISN'T.

ILLUSTRATION · SAMPLE DATA

THE PROBLEM

Signals are everywhere. Context is not.

Conflict, instability and security threats rarely exist in isolation. The challenge is not finding information. It is bringing fragmented signals into context, examining the evidence, and understanding what developments may mean.

THE ANSWER

See it on the Atlas. Investigate it in OSINT Studio.

The Calibrex Atlas shows conflict events, aircraft and vessel movements on a 3D globe. Every pin opens into its sources, so analysts can compare reports, connect what the evidence supports, state their confidence and brief with the evidence attached.

THE WORKFLOW · AVAILABLE TODAY

01 Detect

Monitor conflict events, geopolitical developments and aircraft and vessel movement feeds, with alerts you set.

02 Locate

See events and reported movements in their geographic context on the 3D Atlas.

03 Investigate

Open the underlying sources, compare reports, examine timelines and establish what is known.

04 Connect

Relate developments to countries, places, organisations and routes, where the evidence supports a connection.

05 Assess

Judge significance, confidence, potential exposure and the questions still open.

06 Brief

Turn the findings into an evidence-backed report for the people who decide.

WHO IT IS FOR

Geopolitical intelligence Conflict monitoring, country developments, source verification and research

Defence research Public-source monitoring of military activity, regional analysis and historical research

Security & threat assessment Threat monitoring, incident context, location-based situational awareness

Maritime intelligence Vessel movement awareness, route-related risk and incident monitoring

Corporate geopolitical risk Country exposure, operational disruption and early warning

Intelligence consultancies A research platform behind client investigations and analytical deliverables

Universities & think tanks Geopolitical research, scenario analysis, teaching and collaborative investigation

PACKAGES

01

Strategic Monitor

For research teams, geopolitical consultancies and individual analysts.

- Global event and conflict monitoring
- Situational awareness on the Calibrex Atlas
- Source-linked research and investigation
- Analyst training through the Calibrex Academy

Annual team licence or paid evaluation

Pricing on request, after verification

02

Intelligence Workspace

For security teams, intelligence consultancies and corporate risk departments.

- Multi-user research workflows
- Configurable monitoring and alerts
- Risk-focused investigation and reporting
- Team onboarding and specialist training

Annual organisational licence, with support options

Pricing on request, after verification

03

Strategic Intelligence Enterprise

For larger institutions with specific requirements.

- Evaluation of your institutional requirements
- Deployment, access-control and data-governance review
- Contracted support, where agreed
- Tailored training and implementation

Scoped proposal and institutional contract

Pricing on request, after verification

DATA AND LIMITATIONS, SAID PLAINLY

Public tracking has gaps. Aircraft and vessel positions come from public ADS-B and AIS broadcasts. Coverage varies by region, positions can be delayed, and transponders can be switched off.

Timestamps, not guarantees. Every event and position carries its time and source. We do not promise real-time or complete coverage.

Not everything broadcasts. Many military and state aircraft and vessels do not appear in public feeds. Absence on the map is not absence on the ground.

Judgement stays with you. Calibrex helps analysts weigh evidence and state confidence. It does not replace their assessment.

Public sources only. Calibrex works with lawfully available, open-source information. It has no access to classified intelligence.

Start with a paid evaluation, on your own question.

1. Agree one use case from your real work, the success criteria and the users.
2. Evaluate it on your workflow, alongside your analysts, for a fixed period.
3. Decide with scope, pricing, onboarding and limitations in writing.

SEE DEEPER. THINK SHARPER. ACT SMARTER.
